

**IN THE CLAIMS**

Please amend the claims as follows:

Claims 1-6 (Cancelled)

7. (New) An infant eye trainer selectively and releasably secured to a baby bottle, said infant eye trainer comprising:
  - a) means for releasably gripping the baby bottle;
  - b) an elongated member connected to and extending from said gripping means; and
  - c) a visually stimulating ornament connected to and limited to a free end of said elongated member opposite said gripping means and held at a distance from eyes of an infant while feeding from the bottle by said elongated member whereby said visually stimulating ornament is visible to the infant, wherein said elongated member is adapted to permit deployment of said ornament beyond a distal end of said baby bottle while said infant is using said baby bottle, said bottle being about 4 inches long and said extension member extends at least about 2 inches past said gripping means and said ornament being at least 6 inches from the eyes of said infant.

8. (Cancelled)

9. (New) The infant eye trainer as claimed in claim 7, wherein the distance at which said elongated member extends is measured along an axis parallel to a longitudinal axis of the bottle.

10. (New) The infant eye trainer as claimed in claim 7, wherein said visually stimulating ornament is positioned substantially 7 to 10 inches from the eyes of the baby when said gripping means is gripping the baby bottle.

11. (New) The infant eye trainer as claimed in claim 7, wherein said gripping means, elongated member and visually stimulating ornament are integrally formed from a similar type of material.

12. (New) The infant eye trainer as claimed in claim 7, wherein said visually stimulating ornament is a flat, generally round head shape.

13. (New) The infant eye trainer as claimed in claim 12, wherein said flat, generally round head shape has clear edges.

14. (New) The infant eye trainer as claimed in claim 13, wherein said visually stimulating ornament includes a cartoon type face positioned on said flat, generally round head shape.

15. (New) The infant eye trainer as claimed in claim 14, wherein said visually stimulating ornament further includes a pair of loop ears on a top portion of said flat head.

16. (New) The infant eye trainer as claimed in claim 7, wherein said material is plastic.

17. (New) The infant eye trainer as claimed in claim 7, wherein said material is rubber.
